

Zeriol[®] MCO

Technical Data Sheet

Product Description

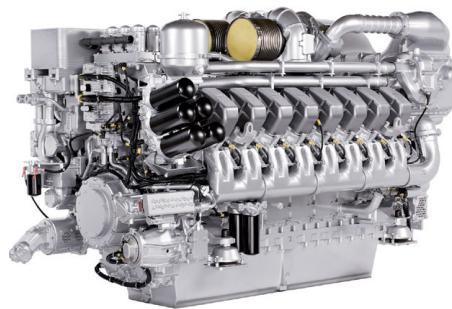

Zeriol[®] MCO is a high-performance preservative oil designed to provide long-term corrosion protection for metal surfaces. It is formulated for engine break-in, lubrication of reciprocating internal combustion engines (both spark-ignition and compression-ignition types), and power transmission fluid applications. Available in multiple grades to meet various operational needs.

Typical Applications

- Engine break-in lubrication
- Reciprocating internal combustion engines (spark-ignition & compression-ignition)
- Power transmission fluid systems
- Long-term metal surface preservation
- Industrial machinery and equipment
- Marine and automotive engines
- Storage and lay-up protection for mechanical components

Key Advantages

- Long-term corrosion protection
- Suitable for engine break-in and lubrication
- Works with spark- and compression-ignition engines
- Effective for power transmission fluids
- Reduces wear and extends equipment life
- Available in multiple grades
- Ideal for storage and lay-up protection
